Problem Statement

- ✓ An education company named X Education sells online courses to industry professionals.
- ✓ On any given day, many professionals who are interested in the courses land on their website and browse for courses. They have process of form filling on their website after which the company that individual as a lead.
- ✓ Once these leads are acquired, employees from the sales team start making calls, writing emails, etc. through this process, some of the leads get converted while most do not.
- ✓ The typical lead conversion rate at X education is around **30%**. Now, this means if, say, they acquire 100 leads in a day, only about 30 of them are converted. To make this process more efficient, the company wishes to identify the most potential leads, also known as Hot Leads.
- ✓ If they successfully identify this set of leads, the lead conversion rate should go up as the sales team will now be focusing more on communicating with the potential leads rather than making calls to everyone.

Business Objective

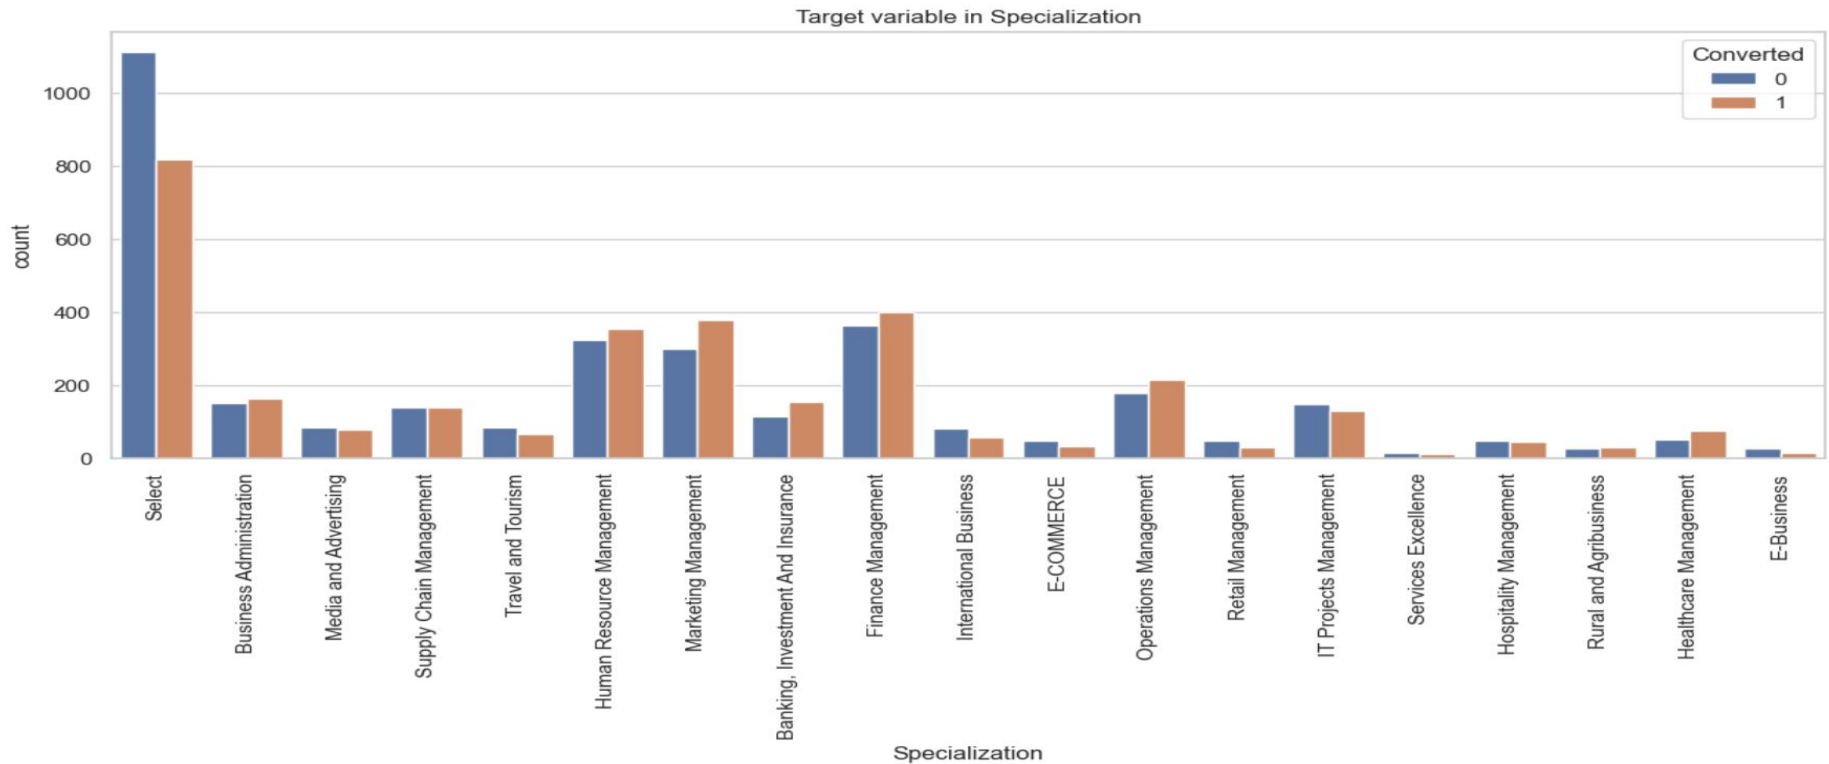

- ▶ Lead X wants us to build a model to give every lead a lead score between 0 -100 . So that they can identify the Hot leads and increase their conversion rate as well.
- ▶ The CEO want to achieve a lead conversion rate of 80%.
- ▶ They want the model to be able to handle future constraints as well like Peak time actions required, how to utilize full man power and after achieving target what should be the approaches.

PROBLEM APPROACH

- ✓ **Importing the data and inspecting the data frame**
- ✓ **Data Preparation**
- ✓ **EDA**
- ✓ **Dummy variable creation**
- ✓ **Test-Train split**
- ✓ **Feature scaling**
- ✓ **Correlations**
- ✓ **Model Building (RFE Rsquared VIF and p- values)**
- ✓ **Model Evaluation**
- ✓ **Making predictions on test set**

EDA – Specialization

Leads from HR, Finance & Marketing management specializations are high probability to convert

EDA – Lead Source & Lead Origin

In lead source the leads through google & direct traffic high probability to convert

Whereas in Lead origin most number of leads are landing on submission

Last Lead Activity

Leads which are opening email have high probability to convert, Same as Sending SMS will also benefit.

Last What is Your Occupation

Leads which are Unemployed are more interested to join the course than others.

Correlation

There is no correlation between the variables

Model Evaluation

ROC curve

Observations

Train Data:

Accuracy : 72%

Sensitivity : 65%

Specificity : 80%

Test Data:

Accuracy : 72%

Sensitivity : 65%

Specificity : 78%

Final Features list:

- ☐ Lead Source_Olark Chat
- ☐ Specialization_Others
- ☐ Lead Origin_Lead Add Form
- ☐ Lead Source_Welingak Website
- ☐ Total Time Spent on Website
- ☐ Lead Origin_Landing Page Submission
- ☐ What is your current occupation_Working Professionals
- ☐ Do Not Email

Conclusion

- ✓ The conversion rate for API and Landing Page submissions is around 30-35%, which is close to the average. However, it is significantly lower for Lead Add Forms and Lead Imports. This suggests that efforts should be focused on leads originating from API and Landing Page submissions.
- ✓ The highest number of leads are generated through Google and direct traffic, while the highest conversion rates are observed from referrals and the Welingak website.
- ✓ Leads who spend more time on the website are more likely to convert.
- ✓ The most common last activity is email opened, whereas the highest conversion rate is associated with SMS sent. A majority of leads are unemployed, but the highest conversion rate is seen among working professionals.
